

THE CEA CONNECTIONS GUIDE

Making Heads or Tails of Audio-Video Connections

So, you've got your new DVD player, HDTV or other audio-video products – now how do you set them up? And what is the difference between S-Video, Component, Composite, DVI and so on?

The Consumer Electronics Association (CEA) has a consumer resource to help get products out of the box and into operation in a snap. It's the CEA Connections Guide – www.ceaconnectionsguide.com – an online Flash program that takes you step-by-step through the set-up process. This interactive resource demystifies the back of your audio and video products and explains the differences between various inputs and outputs through photographs and descriptions of each connection. A Frequently Asked Questions section will help you better understand the performance differences between various cables, as well as answer other important questions.

Get the most out of your consumer electronics by selecting the best connections and cables!

CEA Connections Guide Highlights:

- Provides easy-to-understand descriptions and photographs of each connector
- Educates consumers about the performance differences of each connector
- Shows the consumer where the connectors are located and how they can use them to optimize product performance
